## IMPORTANT TIPS FOR OPTIMAL GI HEALTH DURING YOUR TIME ON A LOW-FODMAP DIET:

- Liver from pastured animals one to two times weekly will help to replenish your vitamin B12, iron, and other nutrients you may be deficient in due to dysbiosis.
- Homemade bone broths can be very healing for the GI tract.
- Meats are most easily digested when prepared at low cooking temperatures, using moist cooking techniques. Consider using a slow-cooker, stewing, braising or poaching for at least 30 days.
- Vegetables should be well-cooked with any seeds removed to improve digestibility; minimize your intake of raw, fibrous fruits and vegetables. For more information on this, see: <http://chriskresser.com/got-digestive-problems-take-it-easy-on-the-veggies>
- Be very careful when eating out, and consider calling ahead to ask about preparation methods and ingredients to find an option that works for you.
